

Project Name: Athabasca River Bridge on Hwy 63 (NBL) at Fort McMurray

Location: Ft. McMurray, Alberta Canada

Owner: Alberta Infrastructure and Transportation

Client: Flatiron Constructors Canada Limited

Project Facts: A \$127 Million project which includes a new steel girder bridge that is designed to be launched from one end to the other due to environmental and river access restrictions. The substructure is founded upon drilled shafts and the substructure consists of 6 each bull nosed piers that are to be constructed using the in-the-dry method. This is achieved by constructing temporary earthen berms to the middle of the river in phase while maintaining the river flow.

Services Provided: Performed detailed take-offs and estimate for the entire substructure and superstructure concrete portions of the project. We provided activity durations to the scheduler to assist in the development of the project schedule.

When: January 2008 thru Feb 2008
