

Project Name: Dresbach Bridge Replacement – I-90 over the Mississippi River

Location: Minnesota / Wisconsin State Line

Owner: Minnesota Department of Transportation (MNDOT)

Client: FIGG Engineering Group

Project Facts: The I-90 Bridge over the Mississippi River is a heavily used commuter route for travelers in the La Crosse/La Crescent region. The existing bridge was completed in 1967 and has become structurally deficient along with not being able to handle current capacity needs. The new crossing will consist of two separate bridges parallel and upstream from the existing bridge. They will be concrete box girder structures over the main river channel and precast concrete girders over the back channel.

Services Provided: Armeni Consulting Services performed a peer review of the construction estimate, schedule and constructability for the project. This included developing a contractor style estimate in HCSS, project schedule in Primavera P6 and CAD construction drawings as needed throughout the 30%, 60% and 90% design stages.

When: March 2011 – April 2012
